

→ Given an array Nums of length N

1. create a second array Ans that has:

* $\text{Ans}[i] = \text{Nums}[i] \rightarrow$ Ans must have all elements of Nums in same position

* $\text{Ans}[i+N] = \text{Nums}[i] \rightarrow$ N being the length of Nums meaning the extra space on Ans will be a copy of Nums items following the same order, but on the extra indices created.

* Ans size must be 2N (double the size of Nums)
